

Raster™ Braille Tool – RBT

The Raster™ method has quickly become the preferred process for producing Tactile Braille signage. Together with Zünd's advanced routing, engraving and inlay capabilities you will enjoy the world's most productive Braille sign fabrication system.

The raster method has emerged as the preferred process for creating tactile/Braille signage for the blind and visually impaired. The process is quite simple: the router drills holes into the substrate, and the Raster Braille Tool automatically inserts the spheres. Because the spheres fit perfectly into the holes, the resulting Braille is resistant to wear and exceedingly durable.

The Raster Braille Tool is perfectly coordinated with Zünd's routing/engraving tools, which make the entire process very efficient. Zünd's Braille Tool utilizes the Raster™ Pen and licensing kit from Accent Signage Systems, Inc., that provides everything you need to start producing great looking and functional Braille signage. The licence kit includes a user manual containing all the in-

formation you need to easily and consistently make Braille signage that complies with local laws and regulations.

Designs can be made using standard available design software utilizing standard available Braille fonts.

The RBT is fully compatible with all Zünd Universal Modules.

Specification

Any Zünd routing option can be used for drilling.

Router Modules with the optional Surface Compensation ensure accurate Braille height

Compatible with **G3**, **S3**, **D3**.

Benefits

Meets ADA and ANSI guidelines.

Secure fit of spheres in substrate.

Fast and easy fabrication.

Consistent and uniform Braille dots.
