

Universal Module – UM-120

The UM-120 is used as a carrier module for numerous tools on cutters with 120 mm beam height.

The UM-120 was specially developed for G3 cutters with 120 mm beam height and has a very large stroke. This allows for processing material thicknesses up to 110 mm. As a universal module, the UM-120 accommodates a wide range of tools. This makes adapting the cutter to the job at hand very quick and easy.

The UM-120 features a very fast Z-axis, which results in faster processing times and significant increases in productivity. Since raising and lowering the tool in corners is faster, this is especially true for jobs involving complex contours. Depending on the requirements, the module

can be operated in either pressure or position mode.

For quick and simple tool changes, the module is equipped with a convenient bayonet catch.

ZSF-03-2016-m&k

Details

Max. material thickness: 110 mm

Compatible tools:

- Driven cutting tools: EOT, EOT-250, POT, DRT
- Cutting tools for drag knives: UCT, SCT, VCT, PPT
- Marking & drawing: UDT
- Creasing: CTT1, CTT2

Processing pressure: 2-10 kg

Compatible with **G3** cutters with 120 mm beam height.

Benefits at a glance

Universal carrier module for wide range of tools.

Bayonet catch for quick tool changes.

Tool detection automatically registers whether a tool is inserted in the module.

Two operating modes, pressure or position.

Optional glide shoe available for processing challenging materials.
